**Please no siblings**

You are needed to help solve a mysterious crime involving an ancient gold coin collection! Be part of the crime scene investigation team.

### **CRIME SCENE REPORT**

POLICE DEPARTMENT

CASE REPORT # 4708

This morning at approximately 8:30 a.m., a serious crime was committed right here at our school, and the Police Department is asking students to help them solve the mystery! A valuable collection of ancient gold coins had recently been delivered to the school. They were to be exhibited in a new display case in the office. School administrators were shocked to learn that in broad daylight, just hours before they were to go on display, the coins had been stolen! Several arrests have been made in connection to the case.

The Police Crime Lab has already conducted tests on possible evidence obtained from the five suspects taken into custody, and the results have been entered in the Evidence Chart on the back cover. Your job tonight is to investigate the crime scene evidence. Learn how to analyze physical and chemical evidence, conduct blood typing tests, and more. By comparing the results of the crime lab's tests to the results of your investigations, you will be able to identify who the criminal is.
